

US Serial No. 10/518800
Page 2 of 11

In the Claims:

- 1.(currently amended) A moist wipe for cleaning a wooden surface to reduce or prevent the formation of water stains, the wipe comprising a sheet material pre-moistened with a liquid composition, said liquid composition being an aqueous emulsion consisting essentially of:
 0.01 to 5%wt. of a paraffin wax,
 0 - 10%wt. of an anti-static compound,
 0.5%wt. to 20%wt. of an aliphatic C_1 - C_4 alcohol carrier or cleaner;
 0 - 0.2%wt. of a fragrance;
 optionally a preservative;
 optionally an amphoteric surfactant;
 and the remainder to 100%wt. with water in an amount of at least 80wt.,
 wherein 50 to 98% in each case by weight of the total weight of the liquid
 composition is characterized in that no silicone compounds are present in said liquid composition.
- 2.(currently amended) A moist wipe as claimed in claim 1 wherein the wax is present in the composition in an amount of between 0.05% to 3% by weight of the total weight of the liquid composition.
- 3.(previously presented) A moist wipe according to claim 1 wherein the liquid composition includes, as a carrier and/or a cleaner, an aliphatic C_1 to C_4 alcohol.
- 4.(previously presented) A moist wipe according to claim 1 wherein the sheet material comprises a porous, absorbent, non-woven fibrous material.
- 5.(previously presented) A moist wipe according to claim 1 wherein the loading of the liquid composition on the wipe is in the range of 30 to 150 grams/cm².

- 6.(previously presented) A packaged product comprising a substantially airtight container having a resealable opening and a wipe according to claim 1.
- 7.(previously presented) A method of treating a surface, said method comprising the step of: providing a wipe according to claim 1 and, drawing the said wipe across a surface.
- 8.(previously presented) A method of manufacturing a wipe according to claim 1, the method comprising the steps of providing a sheet material and moistening the sheet material with the liquid composition.
9. (previously presented) A method according to claim 8 wherein a supply roll of sheet material is unwound to provide a continuously moving web of material.
- 10.(previously presented) A method according to claim 9 wherein the web of material is slit to form perforated tear zones, or individual wipes in the form of a stack.
- 11.(canceled)
- 12.(canceled)
